THE PSYCHOLOGY OF TRADING SUCCESS:

Welcome to "The psychology of trading success" If you require additional support you can contact me in the Financial Hideout Discord channel. You can click the hyperlink or find the invitation in my Instagram bio.

Additionally, for a beginner to advanced trading guide created to teach you how to become a profitable trader and escape the rat race, see my e-book using this hyperlink for a discount. Otherwise... Let's begin.

From the outside as well as on social media trading the financial markets looks like an easy way to make a lot of money and travel the world. But...

There's a little bit more to it than just logging into an exchange and printing profits, it requires a deep understanding of not only your strategy but also the emotions that drive our decision-making process.

And yes like many other traders, this is where I fell short when I first started trading back in 2018.

My initial thoughts were, this can't be hard all these traders on Twitter are making stupid life-changing gains from trading. Let me quickly learn technical analysis and I'll be on my way to freedom... I couldn't have been any more wrong.

Although technical analysis has played a huge factor in my trading results and undoubtedly yours in weeks to come. What really built my trading edge was improving my trading psychology.

More specifically looking within myself to understand why I was making certain trading decisions, labelling them and learning how to control them/improve upon them to develop my all-around approach to trading the markets.

I will teach you the methods and insights in this guide that you can use and adapt to avoid succumbing to the same psychological traps I did when first starting out. Think of this as a short journey of self-reflection where your goal is to identify areas where you may have experienced the emotions discussed and how you could have improved upon them to change the result of your trade.

©

CORE CONCEPTS

Let me start by asking you, have you traded before? If you said yes, you'll know trading can be quite the emotional roller coaster.

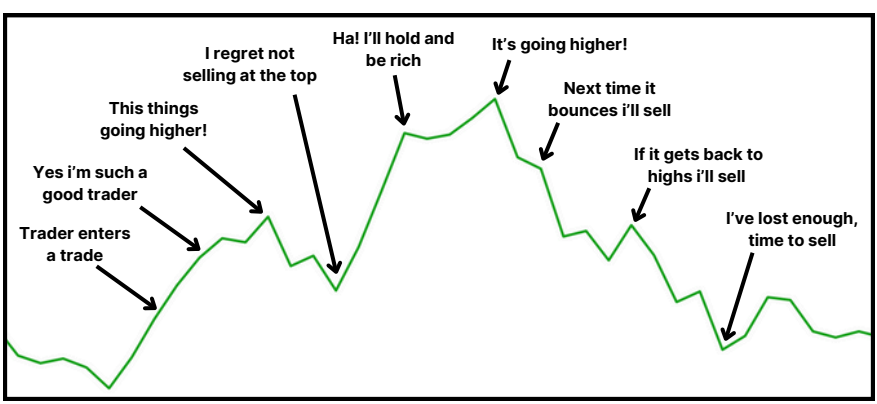

At times you'll want to punch a wall in anger, sometimes you'll want to cry in the corner of a room, other times you'll want to hold longer in greed and other times you'll be fearful of failure or missing out.

All of those feelings and the feelings I'm about to cover come down to one common denominator... We're trading with our hard-earned cash! Money we have traded time and effort to obtain. Of course, we're going to feel emotion no one wants to lose money they've worked for, it's only natural but...

Trading is one of those careers where there are gunna be a few losses along the way, a little heartbreak and many times you'll want to quit.

The key is not to succumb to these emotions, and I'll show you how very soon.

If you said no and you've never traded before it's okay, you're getting this guide prior to making a lot of these mistakes. The emotions above are what most traders feel when entering a trade. Let me run you through how a trader's thought process may take control during a trade.

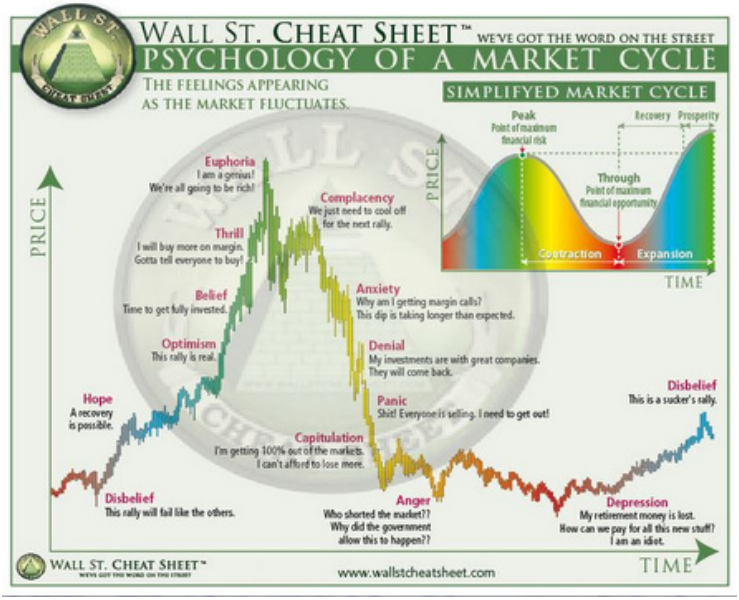

What happens in the example is the trader enters a trade with not only a poor trading system (Identified by their lack of an exit plan) but also poor emotional control given they stayed in the trade all the way into profit and back into a loss. The key emotions at play here are: Greed, Fear, overconfidence and regret, but what lessons can we take from this.

Firstly, Never be overconfident as a trader, it's easy to feel confident when a trade is trading in our favour but it's much harder to be confident when taking a loss. How can you be confident when taking a losing trade? Don't worry I'll give you a strategy later in the guide which will allow you to view a loss like a professional.

Secondly fear creeps in when the trade starts trading against the trader leading to regret in not selling the top. At this point price can go either one of two ways, trade further into a loss where the trader will sell, or trade higher again where the untrained trader will repeat the same mistake.

Lastly is greed, greed plays such a huge role in a trader's ability to become successful, simply down to the fact that they'll end up holding a trade for too long back into a loss. Having clear thought-out trading rules will help combat this, I'll show you how in just a moment. Before that let's take a look at one of the most famous depictions of sentiment felt in the market throughout a market cycle.

Fundamental advice:
1: No trader has lost money taking a profit.
2: Traders can never sell the exact top or buy the exact bottom.

©

GAINING EMOTIONAL CONTROL.

Within the next few pages, I'm going explore some of the key emotions felt when trading the financial markets as well as provide you with some of the key methods I've used to gain control over my emotions while trading. Feel free to adapt them to help improve your trading psychology.

GREED:

Greed comes into play when your trade is running in a profit, you'll start calculating how much you'll make if you win the next 10 trades. Heck, you may even start looking at Lamborghinis.

You'll be telling yourself the profit will keep increasing which will ultimately lead to hesitation when it's time to locking in profits just for a chance of gaining an extra 1%.

In addition to hesitation, being too greedy more often than not will result in watching the trade completely reverse into a loss of capital.

To combat greed, set yourself up for success with a clear set of trading rules, well-defined entry/exit criteria prior to the trade as well as the pre-setting a stop loss, i've included some trading rules later in this guide but feel free to use the formula below to create your own.

Key tips:
If prices hit your TP - lock it in, it's better to sell in profit than watch it reverse into a loss. Want to leave a runner? Use a trailing stop to protect the profits already made, or lock in 75% of the profit and leave 25% to run.

Adapt this formula: When [market condition], and [indicator] shows [signal], [risk management], then [action].
Example: When price bounces off support, RSI is oversold, use a 2% risk per trade, then enter a long position.

FOMO (FEAR OF MISSING OUT):

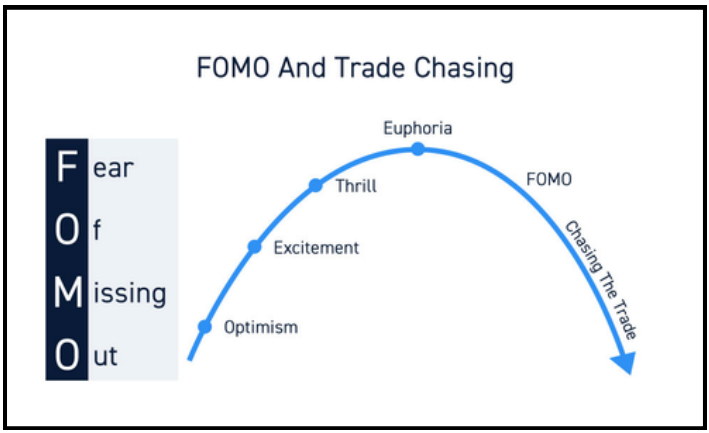

Fear of missing out is looking at another trader's analysis, getting excited by their trade set-up although it doesn't quite fit your own trading criteria but entering anyway, purely on the basis of you thinking they know better than you and must be right.

Chances are you'll get into the trade late, the trade will have a bad risk/reward, and then you'll be used as exit liquidity because you don't fully understand the process the trader has gone through to come to the conclusion of why they took the trade.

The fix? From my experience, the quickest fix to this is only trading when the trade aligns 100% with your trading plan. Yes you may miss a few trades but luckily for us, this isn't Pokemon... we don't have to catch them all to be successful.

Another workaround is if you see a trade signal that doesn't quite fit your trading plan, try to understand it. Systematically breakdown their set-up and see if there is anything you may be able to include in your own trading plan to improve it.

The key is only to adjust your trading plan it if it's going to increase your win %.

©

STRESS/ANXIETY:

Feel stressed or anxious about a trade? The quickest fix is lowering the amount of capital at risk, you're probably trading with money you can't afford to lose.

9/10 times when a beginner trader first starts trading they'll enter a trade with their entire account and then experience a tonne of anxiety and stress watching the profit and loss fluctuate up and down.

This tends to always come down to trading with money they're not willing to lose, because they've worked so hard to acquire it from their 9-5 job.

To alleviate some of that stress the best method I found was becoming financially stable. What I mean by this is building up a little savings account to help me on a rainy day should I need funds for anything life has to throw. This helped me avoid living paycheck to paycheck. It wasn't much, but just enough to make me feel more comfortable risking my hard-earned cash.

Another way I limited these emotions was by starting small. Start with a small $100 account to get used to the emotions behind entering and exiting trades. The key is to position size correctly and use proper risk management.

©

ANGER/FRUSTRATION:

Angry about a loss → Evaluate the trade.

Have you ever wanted to punch the screen after losing a trade or even felt frustrated when you enter a trade, price hits your stop loss then almost perfectly hits your take profit?

I know I have! The best way I've found to deal with it is taking a step back and trying to understand what went wrong and whether there's anything I could have done to improve the trade and potentially turn it into a winner next time. Before the evaluation process I would take a day or two away from the charts. Here are some crucial questions to ask yourself:

- Was it me? The market environment? or The Strategy?
- If the trade was long - Was the market trading up before the entry?
- If the trade was short - Was the market trading down before the entry?
- Who was in control at the time of the trade, was it buyers or sellers?
- Did I enter the trade based on my trading strategy?
- Was the entry at the best possible area in the market to fit my strategy?
- Was it the right trade but the wrong entry?
- Was the stop loss too tight not allowing enough room for normal fluctuations in price?
- Was the profit target reasonable or over-extended?
- Did I take enough time to consider all the trade criteria before entering?

Working your way through that list after a loss will reveal areas you may be able to work on to position yourself in more winning trades.

©

LACK OF CONFIDENCE:

Lack of Confidence → Practice more.

If you feel unsure about entering a trade, this page is for you.

90% of the time traders will feel unsure about their entry because they haven't taken the time to practice and build up the conviction and data to trust their trading strategy.

How can we fix this? I would recommend heading over to Tradingview or your brokerage's demo trading setting, grabbing a trading journal (Stick around till the end i've got something to help), then backtest a minimum of 100 trades with your trading criteria to get an understanding of how the strategy has worked in the past. Log the data in your trading journal to help determine the win %.

Pro tip: if you don't know the win % of your strategy you're essentially trading blind.

Next forward test the strategy, practice trading in a simulated environment and take 200 trades, collecting all the data and results in a trading journal to determine how effective it is. As you work your way through this process try to find commonalities between the winning and losing trades, while also making slight adjustments to improve it.

Taking the practice trades will give you so much conviction in your strategy because you'll know it works. The more practice the more confidence you'll have.

Essentially if there's one thing you want to understand about your strategy that will give you unlimited confidence in your entries, exits, winners and losers is win %. Knowing the win % will not only help you trust your strategy but also make you more comfortable with losing 5 trades in a row if you know the 6th should be a winner. It's all about risk/reward (something that I'll cover in another guide)

I've included a quick step-by-step of the entire process on the next page, feel free to use it or ask me any other questions in the discord - **Click here to join.**

©

CONFIDENCE BUILDING PLAN:

1. Create a Trading Strategy:
   - Clearly define your entry and exit criteria, risk management rules, and other parameters. (need a strategy? check out the last page)

2. Develop a Trading Plan:
   - Outline the specific steps and procedures for implementing your trading strategy.

3. Backtest Your Strategy:
   - Use historical data to assess the performance of your strategy under different market conditions.

4. Take 200 Practice Trades:
   - Open a demo trading account and execute your strategy in a simulated environment to get an understanding of how it works.

5. Track the data:
   - Record details for each trade, eg: Trade details, analysis, rationale, emotions, trade management, outcome, lessons/improvements, trade statistics, screenshots/charts, market conditions and any comments.

6. Refine every 5-10 trades:
   - Use all the data from step 5 to evaluate how well the strategy is working and refine it as you go along. by the end of this entire process, you should have developed a winning strategy that you have 100% confidence in. You'll then be ready to snipe some profits in the live markets.

©

LACK OF CONSISTENCY:

Lack of Consistency → Define a routine

Don't underestimate the power of a good routine, recently I've been getting a lot of messages from traders asking me how to be more consistent.

The first thing I always ask is - Do you have a defined trading routine? Most of them say no. So I'll outline 4 core principles you'll need to define to help create your own winning routine to stay consistent when trading.

Balancing trading and our lifestyles can be extremely hard, I know I'd love to sit in front of the computer all day looking at charts but, life has to happen in between. Some traders have businesses to attend to, family to see, kids to pick up from school, friends to catch up with and jobs to keep. A routine will help you manage all that.

When crafting your routine there are 4 core things you'll want to define to remain consistent...

1: Define exactly when you're going to sit down and trade, the timeframes you'll trade and how long you want to be in a trade for.

2: How much time a day will you spend analysing the charts? I would recommend spending at least 1hr - 2hrs a day evaluating charts to identify opportunities. Once you find something promising add it to your watchlist.

3: How many times a week will you review the trades you've taken? I personally like to evaluate myself every 5 trades so they're fresh in mind.

4: How often will you trade and how often will you rest and reset?

Once you've determined these factors begin to work them into your current lifestyle. For example, say you've got a spare hour in the morning before work, this would be perfect to work in an hour of chart analysis. Once you've clearly defined your routine, write it down then pin it up somewhere you'll see it every day to remind yourself.

Creating a routine is about being more intentional with your time to achieve the goals you're chasing. After around 30 days of sticking to your new routine it will become the norm and consistency to chart, trade, review and rest will just become a habit and feel normal to you.

©

BUILD DISCIPLINE:

To build discipline -> Set long and short-term goals.

When starting my own trading journey I found it incredibly hard to stay disciplined in my approach. I would take these huge gambles, bet my entire account on a trade and hope to get rich, the first problem here was treating trading like a casino. The second was not taking a disciplined approach. It was time for something to change. Here's the exact plan I used to build up my discipline, I call it G•P•A - Goals, Plan, Achievements.

Step 1: Goals
Setting goals gives the trader a sense of direction and a place to shoot for. But here's a trick I like to use to get the best results out of goals and actually achieve them.

- Set long-term goals and short-term goals.

For the long-term goal, I like to set something BIG, something that's almost unimaginable like growing a trading account from $100 to $100,000, yes it might sound ridiculous at first but... what this is going to do Is put you on a journey of improvement. It'll help you strive for more and upskill. For example, after setting this goal we can break it down into how to get there (shorter-term goals). Your first short-term goal might be "make $1000 from $100". Then once you make that $1000 it could become "systemise the process of making $1000 to make $5000" etc and eventually after trading with the end goal in mind you'll stay disciplined in your approach to achieve it.

Step 2: Planning
No disciplined trader is complete without a trading plan. The first stage of planning is identifying how/what you need to do to achieve the goals you've set yourself. Secondly is defining a clear trading plan you will abide by to trade.

This will include: Defined entry/exit criteria, clear risk management rules, a clear trading strategy, set trading rules, a breakdown of how you'll react in certain market conditions, position sizing and a few other things.

Step 3: Achievements
It can't always be work work work, take the time when you reach a goal to look back and celebrate the little wins! Each win is another step closer to achieving your goal - Freedom. By celebrating you'll clearly see the benefits of staying disciplined which will help guide you in staying on track.

©

IMPORTANT MINDSET SHIFT
GET RICH QUICK -> LONGTERM GROWTH

90% of beginner traders need to understand this, trading is not a means to get rich quick, viewing it as such more often than not leads to a trader learning to trade in a week, not making a million then giving up.

Let me put it like this: Trading is the hardest way to make easy money.

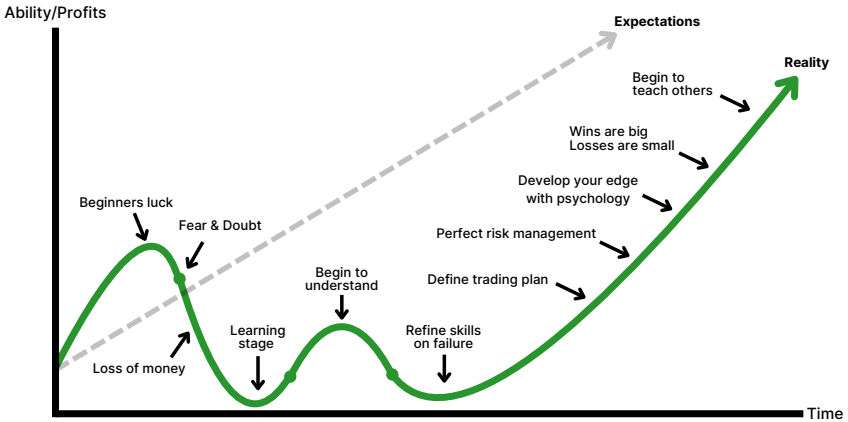

Now what do I mean by that? It's going to take time at first, Which means a shift in mindset has to happen from, getting rich quick to long-term growth. I like to view trading as a journey of trial and perfection.

Focussing on compounding small % gains over a longer time horizon, trying to always identify areas of improvement and consistently seeking betterment. By making this small adjustment trading has become more of an art for me if you will, and provided a much more sustainable path of growth.

To compound results:
Avoid taking payouts initially until the account has grown substantially.
Focus on small % gains and realistic profit targets.
use profits to increase position sizes as confidence grows.

Lastly please understand that there are going to be ups and downs along your trading journey but pursuing freedom makes it worth it.

Realistic journey of a trader:

©

NAVIGATING EMOTIONAL CONTROL:

1**) Gain Self-Awareness:**
Knowing yourself is the foundation of trading success. Understanding your strengths, weaknesses, and emotional triggers will help you align yourself with a trading method, (Day trading, Position trading, Swing trading or Scalp trading) as well as make better-informed decisions in the heat of the moment.

You'll find a self-assessment worksheet on page "" that may help you identify your strengths and weaknesses as a trader, I've also incorporated the worksheet into a free gift at the end. Once completed highlight the key areas you need to improve, then use the tools/strategies in this little guide to develop in those areas.

2) Create a trading plan:
I've got a free guide on the way that'll help walk you through the process but for now, here's what you'll need to do to begin your trading plan. Having a trading plan will provide a strict framework to follow to reduce emotional reactions to the market.

Plan essentials: Defined risk tolerance, trading goals, trading strategy, trading rules, and defined routine.

3) Risk Management:
Effective risk management in my opinion is one of the most important aspects of trading. Yes, it isn't directly linked to mastering an emotion but... by having a proper risk management strategy in place, it rules out a tonne of stress and provides even more clarity in your trading plan. The key factors involve setting stop-loss orders and having a set position size. I've also got a free guide on the way so follow @financialhideout to grab that when it releases.

4) Practice Patience
The impatience to wait for a trade that suits your trading plan often leads to impulsive decisions that result in losses. Patience is crucial. Wait for the right opportunities and avoid taking a trade just because you want to trade. I'll be honest you might wait hours or even days for a trade to develop and that's ok there will be plenty more opportunities tomorrow and the days after that. Be patient and execute your trading plan only when the set-up is right.

5) Keep a trading journal (Journal everything):
Maintaining a trading journal allows you to track your trades, record emotions, and review your decision-making process. It's a valuable tool for self-improvement and skill development.

©

6) Seek improvement:
Markets change, and we traders must adapt. Staying informed and continuously looking for ways to improve upon what you already know, your emotions, systems and reactions to certain events is all part of trading.

The beauty of trading is there's always something we can do better to develop our edge in the market.

7) Seek Support:
Don't hesitate to seek support when needed. Whether it's finding a mentor, joining a trading community, or consulting a therapist, support is valuable and we need it from time to time.

I've made a tonne of mistakes in my years of trading, feel free to ask me anything and hopefully you'll be able to fast-track your journey while using the information to avoid the mistakes I have made in the past.

8) Feel like quitting? Don't:
In my opinion, trading is the best skill I've ever taken the time to learn, yes it's f**king hard in the beginning but that's because you've not found what works for you. I hate to break it to you, but you're never gonna find out what works for you if you quit, plain and simple. I see far too many traders quitting right before starting their growth curve, and it kills me to know that they are probably one or two small adjustments away from success. Take a look at the example below.

©

TRADING AFFIRMATIONS

Affirmations are another great way of reminding yourself before every trading session the type of trader you are. I'm a strong believer in the law of attraction and affirmations are a welcomed addition that will help you train your mind for success. This won't be for everyone but feel free to give it a try for a week. Even come up with your own affirmations based on your goals. The first person that needs to believe they're possible is yourself.

"I approach trading with a calm and focused mind."

"I trust my analysis and stick to my trading plan."

"I am patient and wait for the right opportunities."

"I embrace discipline and follow my strategy consistently."

"I accept that losses are a part of trading, and I learn from them."

"I release fear and make decisions based on analysis, not emotions."

"I am in control of my trading decisions."

"I maintain a long-term perspective; trading is a marathon, not a sprint."

"I manage risk wisely and protect my capital."

"I am resilient, and I bounce back from setbacks."

"I celebrate my successes and learn from my mistakes."

"I believe in my abilities as a trader, and I am confident in my decisions."

"I will only trade when price perfectly aligns with my set up and trading plan."

©

HOW TO DEAL WITH LOSSES:

1. Understanding Losses are normal:

- Firstly I'd like to say, that losses are an inherent part of trading. We all have them, get used to it. Anyone who tells you they have a 100% win rate is straight-up lying.

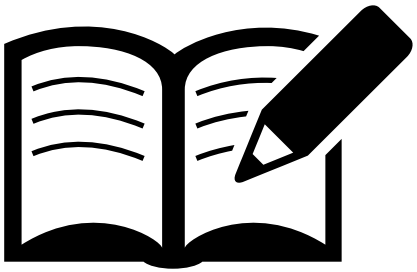

- Even successful traders face setbacks they just find a way to improve upon their losses and get better, that's the key benefit behind tracking every trade... Improvement.

- Try to establish a mindset treating losses as routine, for example, imagine you face a loss the question should then be right... this is an opportunity to get better, where did I go wrong? Was it me, the market or the strategy?

1. Mindset Shift: Turning Losses into Lessons:

- Develop a growth mindset: We can't grow if we don't suffer a few setbacks along the way. Repetitive I know but it's so important to see losses as opportunities for improvement and personal growth.

- Reframe losses as feedback: I like to think of it like this, when we're working a normal job we have a boss or manager to tell us we've made a mistake or done something wrong. Losses are that to a trader, use the trading journal I've provided at the end as your own HR department and start treating trading more like a business.

©

SELF-ASSESSMENT WORKSHEET

Name: _____

Date: _____

Part 1: Strengths and Weaknesses

Please rate the following statements on a scale from 1 to 5, where 1 is "Strongly Disagree" and 5 is "Strongly Agree."

I am disciplined and stick to my trading plan consistently.

- ☐ 1
- ☐ 2
- ☐ 3
- ☐ 4
- ☐ 5

I have a clear and well-defined risk management strategy.

- ☐ 1
- ☐ 2
- ☐ 3
- ☐ 4
- ☐ 5

I am patient and wait for the right trading opportunities.

- ☐ 1
- ☐ 2
- ☐ 3
- ☐ 4
- ☐ 5

I am good at controlling my emotions during trades.

- ☐ 1
- ☐ 2
- ☐ 3
- ☐ 4
- ☐ 5

I keep a detailed trading journal to track my trades.

- ☐ 1
- ☐ 2
- ☐ 3
- ☐ 4
- ☐ 5

Part 2: Emotional Triggers

Identify emotions or situations that trigger emotional responses during your trades.

Fear: _____
Greed: _____
Frustration: _____
Impatience: _____
Overconfidence: _____

Part 3: Goals

Set one specific goal related to improving your trading psychology. This could be based on your strengths, weaknesses, or emotional triggers identified above.

Goal: _____

Action Steps to Achieve the Goal: _____

_____

Part 4: Reflection

Take a moment to reflect on your self-assessment. Are there any insights or realizations you've gained from completing this worksheet? Write down your thoughts below.

©

TRADING RULES

By abiding by a clear set of trading rules, traders can establish a reliable framework to guide decision-making, mitigate risks, and cultivate the discipline necessary for consistent success.

1. I will plan each trade carefully.
2. I will set achievable profit targets.
3. I will limit risk to a set percentage of my capital.
4. I will use stop-loss orders to manage losses.
5. I will learn from both winning and losing trades.
6. I will stay disciplined and focused, managing emotions.
7. I will never 'FOMO' into a trade.
8. I will only trade when price aligns with my trading set up.
9. I will avoid impulsive trades, practicing patience.
10. I will never move my stop loss if price approaches.
11. I will adapt my strategy to changing market conditions.
12. I will trade only with capital I can afford to lose.
13. I will continuously educate myself on trading.
14. I will trade based on thorough research, not rumours.
15. I will avoid revenge trading and maintain rationality.
16. I will regularly self-assess to enhance my performance.
17. I will only ever move my stop loss to protect my profits.

©

TRADING JOURNAL POINTERS

Use this checklist as guidance when it comes to journalling your trades, you'll also find a link to a free gift on the next page that will make your life 10x easier when it comes to tracking trades.

Trade Details:
Date/Time
Symbol/Asset
Direction (Buy/Sell)

TRADING CHECKLIST

This can be used before entering trades:

Trade Date: _____
Asset ticker: _____
Timeframe: _____

General Trading Considerations:

Market Analysis:

- ☐ I have analysed the market conditions and sentiment.
- ☐ I understand the current trend and potential reversals.

Risk Management:

- ☐ I have determined my risk tolerance for this trade.
- ☐ I have set a stop-loss order at an appropriate level.
- ☐ I have calculated my position size based on my risk.

Entry Strategy:

- ☐ I have a clear entry point based on my strategy.
- ☐ I have considered support/resistance levels or technical indicators.

Take Profit and Targets:

- ☐ I have defined my take profit levels and potential targets.
- ☐ I have considered the risk-to-reward ratio for this trade.

Emotional Control:

- ☐ I am in a calm and focused state of mind.
- ☐ I am not trading out of fear, greed, or revenge.

Patience:

- ☐ I am not rushing into the trade; I am waiting for a clear opportunity.
- ☐ I understand that trading is a marathon, not a sprint.

Post-Trade Evaluation:

Trading Journal:

- ☐ I have logged this trade in my trading journal.
- ☐ I have recorded my emotional state and decision-making process.

Review of Performance:

- ☐ I will review the trade results and assess my performance.
- ☐ I will identify areas for improvement and learning opportunities.

I'LL LEAVE YOU WITH THIS

This guide has come from years of experience, emotional upset and a lot of trial and error. Use this to learn from my ups and downs to improve your own emotional resilience when it comes to trading.

Never overlook the importance of trading psychology.

Thank you for taking the time to read, I promised you a free gift, so to deliver on that promise **Click here to gain access** to a free trading journal or scan below ↓

"Trading is a Psychological Game. Most people think that they're playing against the market, but the market doesn't care. You're really playing against yourself."

Martin Schwarts

Everyone tends to have a solid plan until that profit and loss turns red and the emotions kick in. This guide has explored ways to combat those emotions and become emotionally in control of our trading decisions.

Stay humble, happy and motivated!

You've got this.

If you are looking for a beginner to advanced trading guide created to teach you how to become a profitable trader and escape the rat race, here's a link to grab my ebook for a discout by tapping this hyperlink [Subject to availability].
