Financial Hideout

Helping traders fast-track their journey to profitability.
Thank you again for being a part of the journey.

Trading Plan Introduction:

Welcome to the Financial Hideout trading plan guide. During the course of this free guide, I'm going to outline a roadmap you can use to propel your journey to trading success.

This roadmap will only highlight the key areas you're going to want to focus your attention on, to become profitable as quickly as possible.

In addition to your very own roadmap to success, I'm also going to include the steps you'll need to take, to set up a trading plan for consistent wins in the market.

Now with that being said I can only offer you my guidance on what has worked for me and my journey in the past. Trading is very much an individual game, so throughout the course of this guide if something doesn't quite fit the route you want to go, feel free to make some adjustments.

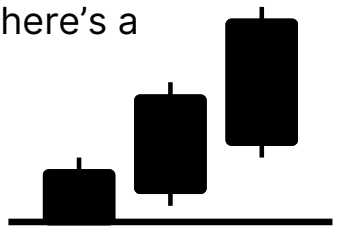

You'll also find that in the roadmap when you begin your own research, some topics may resonate more than others. Focus more on those areas, as it's likely you'll find them easier to implement into your trading system.

Now before we start I want to leave you with this, I see so many beginner traders failing to define their trading plan, trying to focus their energy on too many things. My goal with this guide is to alleviate the information overload to provide you with a clear direction for getting to where you want to be.

Only you will be able to take yourself there.

PS - For further guidance please reach out via the Financial Hideout discord by **Clicking this hyperlink.** Additionally, for a step-by-step blueprint teaching you how to become a profitable trader, here's a discounted link to my **e-book**. Otherwise...

Let's get started.

Traders Roadmap:

In this part of the ebook I'm going to briefly outline everything you'll want to focus on to become a successful trader, it will be self-paced so you can follow it as you please. The goal is to provide you with a clear idea of what to research, so you can quit wasting time.

If you want to cut your journey in half and skip strate to the profit-making strategies, I cover everything in this roadmap in my beginner-friendly "*Traders Execution Journal*" as well as instantly applicable trading strategies you can use the day you purchase. **Clicking this hyperlink to learn more.**

Here's the roadmap:

Step 1: Learn the fundamentals
Take a month or 2 to really dive deep into the fundamentals of trading and technical analysis.

Focus specifically on:

Terminology - It seems simple enough but step one of becoming profitable is literally taking the time to learn the terminology. This can be done on a website called "Investopedia" or simply just type in Google "Trading Terminology" (I also have a free trading dictionary in development.)

Market structure - Market structure is layer 0 of technical analysis, you're going to want to learn this first so you can begin mapping out charts and understanding how price is behaving. (I have a free guide on this check our Instagram.)

Support/Resistance - This will help you determine areas in the market prices are likely to halt. I cover this in-depth with easy-to-implement trading strategies in the "traders execution journal".

Candlestick patterns - Another key component in technical analysis is understanding the behaviour of candlesticks to determine what price is likely to do next.

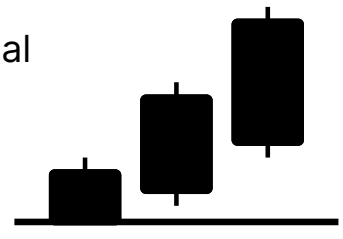

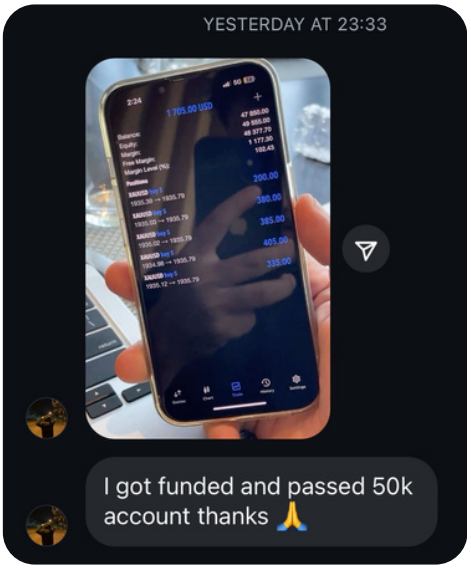

Chart patterns - Chart patterns will allow you to forecast price action, give you clear points in the markets to enter and exit trades and determine how the price is likely to react at certain levels.

Supply & Demand - My personal favourite, supply and demand will allow you to understand the ebbs and flows of the market as well as how to enter/exit trades. - I have put my very own sniper strategy inside the *"Traders Execution Journal"*. If there's one strategy you'll want to learn to profit in the next week, it's that! In fact, it was only the other day that 1 of our traders got his first 50k-funded account with the journal.

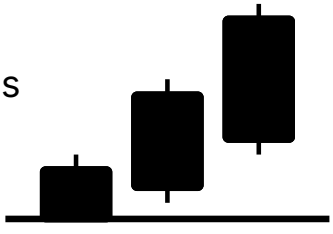

Check it out!

Risk management - Risk management is one of the most important steps learn this and you'll save yourself from so many losses. Capital preservation is so much more important than capital gains.

Trading psychology - As much as trading is about numbers you'll last a lot longer in this game by mastering your emotions to avoid impulsive decision-making and help make rational decisions. (I've got a free guide to help you with this that will land in your inbox 2 days after you grab this guide, be sure to check it out.)

That about covers it for building your foundation. Next up is taking everything you've learnt in this stage and building upon it...

Step 2: Building upon what you've learnt

Choose your preferred market - Stocks, Forex, Crypto, Future, Options. I'll cover this more in the trading plan section of this guide.

Analyse the charts 1hr/Day - You want to start building the habit of looking at the charts and setting them up to identify profitable opportunities take it slow, Rome wasn't built in a day.

Develop a trading strategy - I'll Help you with this step in another guide, if you can't afford to wait - Grab The "Traders Execution Journal" by **clicking this hyperlink** it's the fastest route you can take to gain access to profitable trading strategies with clear criteria to follow.

Create a trading plan - This is the entire focus of this ebook so stay tuned for the later pages I'll outline the process for you.

Define trading rules - Trading rules are essential, without them you are more than likely to deviate from your trading plan. I've done it myself so be sure to make them.

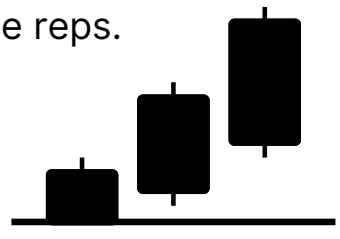

Test yourself in a demo account - The best thing you can do when in the process of learning is test what you've learnt with fake money in a simulated environment. Take 100 practice trades, to help refine what works well for you. Track everything in a trading journal so you can double down on what works.

Need a trading journal? - **Click this hyperlink** for financial hideouts free trading journal to get you started.

Step 3: Build the habit

Time to build a new habit, they say it takes 10,000 hours to build a habit so you're going to need a good routine to get up the reps.

I'll outline a simple question and answer on the next page you can use define yours.

Feel free to use a pad to answer these questions if you need help with a routine or get creative and make your own.

What time do you plan to start your trading day?

Do you have any morning rituals or activities you want to include before trading (Including your day job)?

How much time do you want to allocate to analysing your watchlist before the market opens?

At what time do you aim to begin actively trading?

How long will your trading session last each day?

Do you have specific tasks or routines for post-trading analysis or review?

Will you be setting up a watchlist for the following day, and if so, what time do you plan to do this?

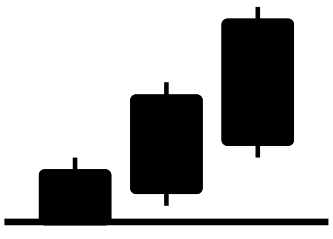

Do you prefer to plan for the next day's trading session in advance, and if yes, what time will you do this?

Are there any breaks or downtime you want to schedule during your trading day?

What time do you plan to end your trading activities and transition to other tasks or activities?

In the end, you should end up with something as simple as this:

- Wake up at 6:00 AM
- Workout at 6:15 AM
- Have coffee at 7:00 AM
- Analyse watchlist at 7:30 AM
- Prepare to trade at 8:00 AM
- Start trading at 8:30 AM
- Finish trading at 12 PM
- Set up the watchlist 3 PM
- Plan for the next day at 6 PM

©

Step 4: Getting ready to fund

By this point, you should have built up enough data in a trading journal to evaluate yourself and be ready to fund an account:

Step 1: Evaluate all your losing trades, identify the commonalities and determine what you could do to improve.

Step 2: Make refinements on the findings to improve your win %.

Step 3: Consider funding an account with $100 to begin with, targeting price moves of 1% with a 1:2 Risk/Reward, and position size of 25%.

Scale your profit targets to 1 - 5% as your confidence/account grows.

There's no better way to build a trading edge than feeling the emotions of entering a trade in the live markets.

Step 5: Compounding results
Understanding this, trading is not a get-rich-quick scheme. You need to re-wire your mindset to long-term growth to really see the success you see from traders on social media. If you don't, you're probably gonna end up quitting within the first year.

The trick?

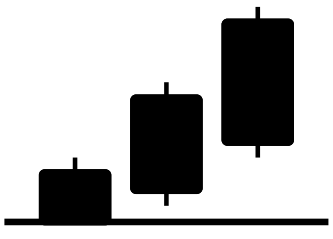

Compounding results:
As your account grows +25%, consider adding +15% in additional funds. This way you're only increasing your total capital once your strategy is proven.

Avoid taking payouts at 1st, this way your position sizes will grow with the account and in theory, your profits as well.

No matter where you are in your journey, always seek improvement. Track your trades, evaluate them and refine where you can.

The markets are ever-changing and so we must adapt.

Next, I'll walk you through creating a trading plan.

Trading Plan Walkthrough:

A trading plan is absolutely essential for any trader to have. Why? The end goal of trading is to become consistently profitable with a rinse-and-repeat process you can use to generate profit, your own “money-making machine”. To achieve this you’re going to need a winning trading plan.

That’s where I come in. In the following pages, I’m going to outline the steps you’ll need to take, to carefully craft your very own trading plan. Make it personal to you and be sure to test it before you think about risking and losing your money.

Step 1: Define Your Goal
Every good trading plan starts with a clear goal, without one you're trading without a direction of where you want to be. You want this goal to be something that gets you up in the morning to chase results. Take a second to write it down.

Key = Ensure it is specific, measurable, achievable, relevant, and time-bound (SMART).

My trading goal is: _____

Why do you want to trade? _____

Step 2: Choose Your Market
What market are you going to trade, Individual Stocks, Stock Options, Forex, Futures or Crypto? Once you decide Write it in the box below or in your pad and focus solely on that market until you're consistently profitable.

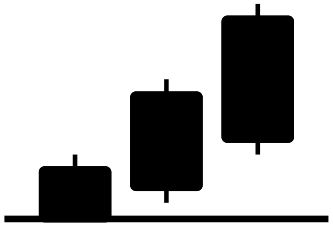

It's easier to learn the nuances of 1 rather than trying to master many.

Market chosen: _____

Step 3: Describe Your Analysis Approach
In your notepad describe the steps you'll take when it comes to analysing price charts to set up your trades. Market Structure Mastery will help you with this process by providing you with the criteria to identify higher probability setups. If you already have a process now is the time to note it down it will help you approach trading more mechanically.

Analysis approach described: _____

Resources needed for analysis: _____

Step 4: Define Your Trading Strategy
A trading strategy is a clearly defined criteria of how you're going to enter and exit trades. It is essential to guide how we'll react to price action and make decisions when trading. Once you have a proven trading strategy your confidence will grow as well as your consistency.

Take a second to outline your trading strategy, considering factors such as entry and exit signals, risk-reward ratio, and trade management techniques.

If you don't have a strategy yet, check out the "Traders Execution Journal" I've outlined the exact strategies I've been profitable with over the years in an instantly applicable manner.

Trading strategy defined: _____

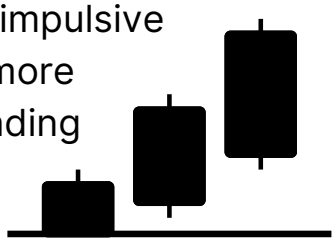

Research or resources needed: _____

Step 5: Set Entry/Exit Criteria
Step 5 is pretty much a spin-off of step 4 but the idea is to make this extremely clear so you can execute trades with precision, confidence and reduce the emotion behind the move. It can be 1 sentence - use this framework to write it.

I will only enter a trade when price [Insert Signal].
I will exit my trade when [Insert Signal].

Step 6: Define Trading Rules
Trading rules are important to trading because they essentially act as a boss to save us from our own decisions. They need to be specific to your risk tolerance and trading strategy. If you have. a bad habit that's affecting the way you execute trades, create a rule to combat it.

The best part about rules is they can stop us from making impulsive trading decisions outside of our trading plan and keep us more accountable. On the next page, I'll outline some generic trading rules feel free to customise them to your liking.

TRADING RULES

Feel free to customise them to your liking.

I will plan each trade carefully.

I will set achievable profit targets.

I will limit risk to a set percentage of my capital.

I will use stop-loss orders to manage losses.

I will learn from both winning and losing trades.

I will stay disciplined and focused, managing emotions.

I will never 'FOMO' into a trade.

I will only trade when price aligns with my trading setup.

I will avoid impulsive trades, and practice patience.

I will never move my stop loss if price approaches.

I will adapt my strategy to changing market conditions.

I will trade only with the capital I can afford to lose.

I will continuously educate myself on trading.

I will trade based on thorough research, not rumours.

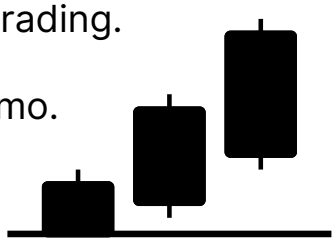

I will avoid revenge trading and maintain rationality.

I will regularly self-assess to enhance my performance.

I will only ever move my stop loss to protect my profits.

After 3 consecutive losses in a day, I will stop trading.

If I lose 10% of my account I'll go back to demo.

©

Step 7: Implement Risk Management
In my opinion, the most important factor of a trading plan is the risk management strategy.

Capital preservation is so much more important than capital gains.

Yes granted making money is such a good feeling but you're going to hate trading if you can't keep the profits you make. This means, focusing heavily on this step when crafting your winning trading plan. You want it to be point-perfect.

The secret is to define:
- You're Position Sizing.
- A Risk Reward that suits your risk tolerance.
- Stop Losses Strategy.

Take a second to write out yours, if you don't have one **Click this hyperlink** "*The Trader Execution Journal*" has everything you need to effectively manage your risk to help preserve your capital, grow your trading account and provide you longevity in this game.

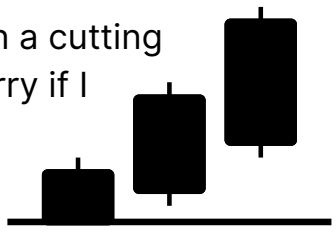

Risk management plan in place: _____

Position sizing and stop-loss criteria defined: _____

Step 8: Tracking the Process
Define how you're going to track your results. For me, it's essential to keep a trading journal. I'll track all my trades in my journal then every 5 trades go back over them to rate my performance out of 10 based on execution, results and emotions felt.

I'll then look at areas I can refine my performance and potentially adjust my trading plan. Granted I won't be making changes every 5 trades but if I'm at a drawdown over the last 5 trades there's bound to be something wrong, so having the data there is essential to levelling up and building your trading edge.

And Yes "The Traders Execution Journal comes fully kitted with a cutting edge, fully customizable trading journal completely free. I'm sorry if I sound repetitive it really is that good.

Step 9: Outline how you're going to improve in the long.

Bonus Step: Master your emotions

1: Greed → Sell.

Greed comes into play when your trade is in a profit.

It will cause to hesitate when it's time to lock in profits at a chance for more.

This normally results in watching the trade completely reverse, into a loss.

If prices hit your TP - lock it in.

2: Fomo → Do not trade.

Fear of missing out will lead you to take a trade that doesn't quite fit your setup.

Avoid this and only trade when price 100% fits your trading plan.

3: Anger → Step back and evaluate.

Have you ever wanted to punch the screen when you lose a trade?

Me to. We're all human.

Anger often leads to revenge trading which leads to... unesseray losses.

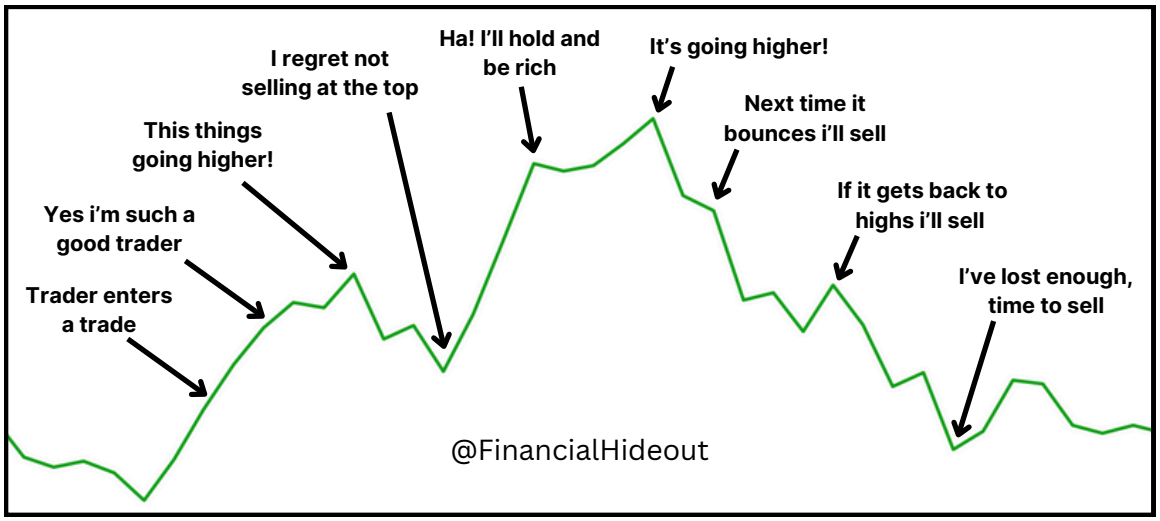

To beat this, step back, evaluate then look for areas of improvement.

The bonus of looking for constant improvement will indirectly build your trading edge.

4: Stress → Lower capital at risk.

If you feel stressed about losing money trading, You're probably trading with too much risk.

Lower your risk and only trade with what you're willing to lose.

I go into detail in my free trading psychology guide, check the links at the end.

Testing your Trading Plan:

Step 1: Define Your Trading Plan - Begin by clearly defining your trading strategy. This should encapsulate your goals, risk tolerance, and preferred trading style. Make sure it's specific, measurable, achievable, relevant, and time-bound (SMART). Your strategy should answer questions like what assets you'll trade, what timeframes you'll focus on, and what indicators or patterns you'll use to identify opportunities.

Step 2: Choose Your Virtual Trading Platform - Select a virtual trading platform that allows you to trade in simulated market conditions. This could be a paper trading feature provided by your brokerage or a dedicated virtual trading platform. Ensure it offers the assets you're interested in trading, realistic execution speeds, and a comprehensive range of analytical tools. Tradingview is my go to.

Step 3: Test Your Trading Plan - Execute your trading plan in a risk-free environment provided by the virtual trading platform. This is where you'll put your strategy to the test without risking real capital. Pay close attention to how your plan performs under different market conditions. Monitor your trades, analyze your results, and refine your strategy accordingly. Remember to focus on consistency and adaptability as you refine your approach.

Trading Journal Checklist to use during the entire process.

- [ ] Position size.
- [ ] Risk management plan.
- [ ] Entry price.
- [ ] Exit price.
- [ ] Tade duration.
- [ ] Profit/loss.
- [ ] Screenshots of set up before trade.
- [ ] Screenshots of set up after trade.
- [ ] Emotions state during the trade.
- [ ] Notes (Think about the entire process of the trade).
- [ ] Scan QR for a free BASIC TRADING JOURNAL all set up and ready to go

SCAN FOR FREE TRADING JOURNAL
